## We take over

### ■ Advising on machine safety

You care about the safety and the health protection of your team. We ensure the optimum state of your machines, which in turn ensures the safety of your employees.

### ■ Optimizing the machine safety

We offer first-class advice to ensure the machine safety. Our team of experts assists you in terms of modification, modernizing old and used machines as well creating safety concepts.

### ■ Providing safety-related inspection

Our experienced specialists carefully inspect and evaluate your plants and machines. We are with you to ensure that your systems meet the necessary safety requirements.

### ■ Risk assessment and declaration of conformity

In the scope of the Machinery directive 2006/42/EC, we help manufacturers and vendors of machines and plants creating well-founded risk assessments to fulfill legal requirements.

### ■ Explosion protection specialists

The explosion protection requires the utmost care and attention. Our expertise in this sensitive area can be life-saving. Rely on our specialist knowledge and experience.

### ■ Providing regular inspections according to national regulations

Our specialists inspect your machines and plants carefully and create detailed inspection reports to ensure that your machines fulfill the national regulations.

### ■ Providing training for maximum expertise

Do you want to train your team in terms of machine safety and explosion protection? Our training courses support you with implementing your company targets.

### ■ Creating customized safety concepts

Are you planning a new machine or plant? We are your partner for customized safety concepts and support you with any safety-related matter.

### ■ Inspecting pressurized enclosures

We offer regular inspections of FEIGE devices with the ignition protection class „Ex p“. We can also carry out corrective maintenance, including the necessary verification documentation, after modification or replacement of components.
